

ABSTRACT OF THE DISCLOSURE

A tool box tray structure includes a molded recess for mounting hand tools of different types. The molded recess includes a first layer having a first color and a second layer having a second color bonded on the first layer. Thus, the tool box tray structure is made of different colors of PET plates which are worked by a secondary heat press process to form the tool box tray structure having different colors, thereby facilitating the user identifying the kinds of the hand tools by the color contrast.
